Reasons For Allowance

The present invention is a gas turbine pulse detonation system and engine using that system. Pulse detonation systems fall into a known category of fuel burning apparatus that has recognized utility in the gas turbine field. None of the references of record however show or fairly suggest a pulse detonation system comprising a rotating cylindrical member with detonation passages including leading, trailing, and middle portions positioned and configured in the manner specified in the present claims, with the pulse detonation system also comprising a stator including a group of ports arranged to cooperate with the forward surface of the cylindrical rotor as further specified in the present claims. The claimed invention is therefore considered patentable over the prior art.
